## Description

The newly developed KET combines modern digital interfaces for connection to energy monitoring systems with a small, compact design. The KET is always used when many machines (compressed air consumers) are to be integrated into an energy monitoring network.

Readout values in the display can be rotated by 180°, e.g. for overhead installation.

Display shows 2 values at the same time:

- Present flow in m³/h, l/min, ...
- Total consumption (counter reading) in m³, l, kg
- Temperature measurement

## Screw-in thread:

Easy installation into the existing pipe due to integrated measuring section (suitable for ½", ¾", 1", 1 ¼", 1 ½" or 2" lines)

## Advantages at a glance:

- Compact, small design - for use in machines, behind maintenance unit on the end user
- All interfaces are freely programmable via the display
- Modbus-RTU output
- 4...20 mA analogue output for present flow
- Pulse output total flow (counter reading), electrically isolated. Optional: M-Bus, Ethernet interface or PoE.

Integrated flow straightener - no inlet section necessary

With a key stroke: reset counter reading, select units, parameterise interfaces

The sensor can be removed from the measuring section and cleaned.
